### Hands-on lab on Hadoop Map-Reduce (20 mins)

#### **Objectives**

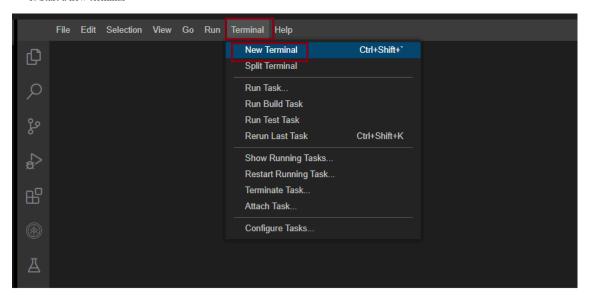

- Run a single-node Hadoop instance
- Perform a word count using Hadoop Map Reduce.

#### Set up Single-Node Hadoop

The steps outlined in this lab use the single-node Hadoop Version 3.3.6 **Hadoop** is most useful when deployed in a fully distributed mode on a large cluster of networked servers sharing a large volume of data. However, for basic understanding, we will configure Hadoop on a single node.

In this lab, we will run the WordCount example with an input text and see how the content of the input file is processed by WordCount.

1. Start a new terminal

- 2. Download hadoop-3.2.3.tar.gz to your theia environment by running the following command.
- 1. 1
- 1. curl https://dlcdn.apache.org/hadoop/common/hadoop-3.3.6/hadoop-3.3.6.tar.gz --output hadoop-3.3.6.tar.gz

Copied! Executed!

- 3. Extract the tar file in the currently directory.
- 1. 1
- 1. tar -xvf hadoop-3.3.6.tar.gz

Copied! Executed!

- 4. Navigate to the hadoop-3.3.6 directory.
- 1. 1
- 1. cd hadoop-3.3.6

Copied! Executed!

- 5. Check the hadoop command to see if it is setup. This will display the usage documentation for the hadoop script.
- 1. 1
- 1. bin/hadoop

Copied! Executed!

- 6. Run the following command to download data.txt to your current directory.
- 1. 1
- 1. curl https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-BD0225EN-SkillsNetwork/labs/data/data.txt --output data.txt

about:blank 1/3

6/16/24, 3:49 AM about:blank

Copied! Executed!

- 7. Run the Map reduce application for wordcount on data.txt and store the output in /user/root/output
- 1
- 1. bin/hadoop jar share/hadoop/mapreduce/hadoop-mapreduce-examples-3.3.6.jar wordcount data.txt output

Copied! Executed!

This may take some time.

- 8. Once the word count runs successfully, you can run the following command to see the output file it has generated.
- 1. 1
- 1. ls output

Copied! Executed!

You should see part-r-00000 with \_SUCCESS indicating that the wordcount has been done.

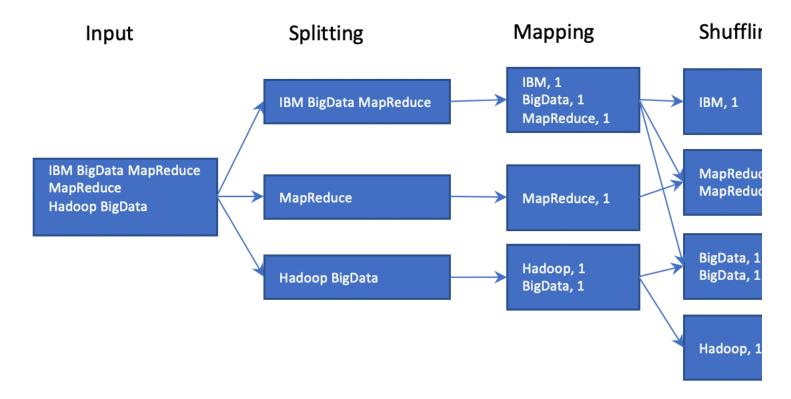

While it is still processing, you may only see '\_temporary' listed in the output directory. Wait for a couple of minutes and run the command again till you see output as shown above.

- 9. Run the following command to see the word count output.
- 1. 1
- 1. cat output/part-r-00000

Copied! Executed!

The image below shows how the MapReduce wordcount happens.

#### **Practice Lab**

1. Do a word count on a file with the following content.

6/16/24, 3:49 AM about:blank

- 2. 2 3. 3

- Italy Venice
  Italy Pizza
  Pizza Pasta Gelato

#### Copied!

- ▶ Click here for a hint on how to get started
- ▶ Click here for hint on how to create a file to wordcount
- ► Click here for solution on how to do word count on the file
- ▶ Click here for sample output

## **Congratulations! You have:**

- Deployed Hadoop using DockerCopied data into HDFSUsed MapReduce to do a word count
